

## INSTALLATION INSTRUCTIONS FOR GARAGE DOOR TRIM

1. Check existing rough opening for proper height, width, and plumb.
2. Install head/mantle pc. up tight to header, (level) then nail the vinyl nailing flange in every other hole with 1 ½" roofing nails.
3. Install fasteners at the rear of top Mantel extension jamb ensuring that garage door stops will conceal.
4. Measure from top notch in ends of garage head/ mantle down to garage floor, check to see if there is a pitch to floor and mark garage sides and cut to length accordingly.
5. Apply supplied glue to where legs and mantel join, plumb legs and nail in every other hole in nailing flange with 1/ ½" roofing nails. On extension jambs, nail at rear so that garage stop will conceal all rear fasteners

**BE CAREFUL OF GLUE. . . IT SETS UP VERY FAST (SEE BOTTLE FOR DETAILS)**
