

QuickTrim Water Table

INSTALLATION INSTRUCTIONS

1. Unwrap Water Table board from packaging – measure and cut to desired length
2. Remove 3/8” Starter Strip from bottom of Water Table board
3. Install 3/8” Starter Strip horizontally 1” below the foundation, nail with 1-1/2” roofing nails in center of slots of Starter Strip
4. Slide the bottom of the Water Table board onto 3/8” Starter Strip, and nail Nailing Flange on opposite side in every other hole with 1-1/2” roofing nails
5. After Water Table is installed, apply weatherization tape (½ on the flange and ½ on the building wrap) for a water tight application

Helpful Tip:

- If warm outside - butt Water Table boards up-tight
- If freezing temperatures outside - leave ¼” between Water Table boards to allow for expansion and contraction
